17 March 1993

Dear Federal Communications Commission:

We, the members of the Palm Beach Packet Group, INC (PBPG), would like to go on record in support of Docket 93-40 which proposes to establish a secondary allocation for the Amateur Service in the 219-220 MHz band. We are very actively involved in furthering the design and implementation of a packet network throughout the state of Florida, and especially in Broward and Palm Beach counties.

Our existing packet network was instrumental in passing emergency traffic, and health and welfare traffic during the recent tragedy of hurricane Andrew. The additional frequencies proposed will be of tremendous help in furthering the expansion of needed LANs to facilitate computer communication.

We hope that due consideration will be given to this proposal, and passed quickly with implementation to follow soon.

Sincerely,

A handwritten signature in cursive script that reads "Terry J. Taylor".

Terry J. Taylor, WB5JFM PBPG Vice-President
